employment

MAY22 - APRIL 23
upwork, weblancer

Fulfilled commercial orders from individuals and companies. Most often it was layout of one-page sites, fixing current layout, edits and adding new components. Created adaptive and responsive design, in some cases mobile-first. Worked with pixelPerfect for perfect pixel-to-pixel layout. For lendings I connected a simple backend like a feedback form, put the layout on wordpress.

USING STACK: HTML, CSS, SCSS, Figma, JS, Gulp, npm, Wordpress, Git

APRIL - JUL 23
Digital Agency GB
Travel, Kazahstan,
full-remote
(CONTRACT, PRODUCT)

I was engaged in creation of lendings and multi-page layout from prototypes created in figma. Created components on react.JS, to build them into the structure of the application, corrected inaccuracies, found visual flaws and bugs in applications and layouts, corrected them. I put the layout on wordpress.

USING STACK: Wordpress, PHP, SQL, Figma, HTML, JS, CSS, SCSS, Gulp, Git, Trello.

JUL 23 - AUG 23
Insoftex, Lvil
full-remote, part-time (PRODUCT)

Was engaged in development on Wordpress . In particular the theme Gem + page editor Elementor. My duties included communication with the designer and SMM , SEO specialists for search engine optimization of the site. I took the layout from the designer and handled its layout on wordpress using Elementor Page Editor plugin. Sometimes I did classic layout html, scss, bootstrap.

USING STACK: phpMyAdmin, Php, SQL, JS, SCSS (bootstrap), HTML, Figma.

AUGUST 23 - present
Amida Software , DNIPRO
hybrid, (PRODUCT)

I am doing commerce and seeding development on magento 2.
My responsibilities include creating layout using HTML, SCSS, Gulp with prototyping in AdobeXD. In addition to this I have also been involved in writing frontend business logic using jQuery (maintaining old code), Redux (writing new logic) and simple vanillaJS on which I implemented the interactivity and site interaction logic. Also, on top of that, I have some familiarity with magento 2 and have done simple tasks like creating templates, layout of landing page on magento 2 etc.
I was engaged in writing documentation for the front-end part of the product .

I also have extensive experience in using and writing solutions for interactivity using jQuery and plain JS, in particular, **used such libraries** :
nouislider, select2, lottieplayer, aos animate, gsap, leaflet, overlayscrollbarsJS, simplebarJS, swiperJS, **i18n (translation) , handlebars (html templates)**

USING STACK: Linux, Docker, WSL, JS, RequireJS (magento2 JS) , PHP, phpMyAdmin, SQL, Redux, Redux Toolkit + RTK Query + Redux Thunk, jQuery, CSS, SCSS, HTML, Magento 2, RestAPI, Bootstrap 6, Gulp.JS, Webpack.

additional work experience & achievements

- **optimized a front-end build** (Gulp.JS) by almost completely overhauling the build structure, integrated new plugins into it and it became 10x faster.
- Integrated redux-toolkit on vanillaJS for dynamic rendering of elements without using React and other frameworks created my own collection of classes and functions that optimize rendering when changing component values and optimize it as much as possible. I
- **rewrote most of the business logic** on front-end side on redux-toolkit to optimize performance and create a full-fledged redux architecture.
- **wrote endpoint documentation and documented** the most important parts of the business logic work on the front-end side.

tech skills / my stack

basic : html, css, js+es6, gulp/webpack, git&github, figma, AdobeXD,

advanced :
bootstrap, typeScript, react.js + reduxToolkit, jQuery, php, magento 2, docker, mongoDB, restApi

education

V.N. Karazin Kharkiv National University, specialty mediacommunations. (in process 2020-2024)

EF SET English Certificate B1 Intermid. (47/100)

recommendations
